DSERIES

BELL

Get more from your truck

If you're looking to deliver more to your bottom line, choose Bell Articulated Dump Trucks.

These D-series ADTs handle heaped payloads with faster cycle times and best-in-class fuel efficiency - so you'll move more material at lower cost. They're highly reliable, too, with high-strength, welded-alloy steel chassis and components that are durable and optimised for no unnecessary weight. And with their oscillating frame joint, articulated steering, and high-floatation tyres, these hard working haulers won't let wet weather or steep grades dampen your plans.

• Extensive use of high-strength, lightweight materials gives these trucks the best payload-to-mass ratios and hauling efficiencies in each class.

• With their oscillating frame and high-floatation tyres, Bell trucks won't leave you stuck on muddy, rutted or hilly terrain.

• The redesigned sound-suppressed cab features fatigue-beating controls, advanced diagnostic monitor and a sealed-switch module for convenient, fingertip operation of numerous functions.

• Fuel-efficient Tier 3 emission-certified engines deliver clean power without compromise in all conditions. Leading-edge emissions technology ensures rapid engine response and dependable cold-start performance.

Specifications	B18D	B20D	B25D	B30D	B35D	B40D	B50D
Gross power	170 kW	170 kW	205 kW	240 kW	290 kW	315 kW	390 kW
Operating mass							
Empty	15 640 kg	14 710 kg	18 400 kg	18 690 kg	28 230 kg	29 850 kg	34 520 kg
Loaded	33 640 kg	32 711 kg	41 600 kg	45 990 kg	60 730 kg	66 851 kg	79 920 kg
2:1 heaped capacity	11 m ³	11 m ³	13,8 m ³	16,6 m ³	20,1 m ³	22,6 m ³	27,5 m ³
Rated payload	18 000 kg	18 000 kg	23 200 kg	27 300 kg	32 500 kg	37 000 kg	45 400 kg

Add enhancements such as a Tier 3 emission-certified engine, solid state electrical system and spacious, redesigned cab with refined controls, and you have everything you need to maximise uptime and productivity.

- Limited-slip differentials (B18D to B30D), controlled traction differentials (B35D to B50D) and transfer case diff-lock provide a traction boost in poor underfoot conditions.
- The best-in-class payload-to-weight ratio means that more of your fuel cost is spent moving the material, not the machine - decreasing your cost per tonne.
- The fully automatic six-speed planetary transmission with torque converter lock up maximises fuel efficiency.
- Automatic retardation slows the truck when the operator backs off the accelerator pedal - for more confidence on steep grades and enhanced brake life.
- Electronic unit injection and common-rail fuel systems provide high injection pressures even at low engine speed for improved cold-starting ability, low-speed response, and reduced emissions.
- High-travel suspension keeps all tyres in constant ground contact for optimum traction.
- The short front end provides an industry-best approach angle that allows these ADTs to attack steep terrain.

• The B20D is the most versatile ADT. It is full on-highway road legal in certain countries, while being a true earth-mover in every sense.

1

1. Transfer case inter-axle differential delivers equal torque to each axle when traction is favourable. When conditions get ugly, engage the diff-lock on the go to deliver torque to the tyres that can best use it.

2

2. The central oscillation joint, high suspension travel on all axles, and balanced weight distribution provide the agility and ability to navigate hostile terrain.

3. Front-suspension damping helps minimize vibration, while the centre-mounted seat reduces the roll often experienced in off-road conditions - for comfortable productivity.

4. Available tailgate helps retain more material for bigger loads. It automatically opens as dump body is raised.

3

4

Haul of Fame

Bell ADTs give you the competitive edge. Boasting faster haul cycles and industry-leading fuel economy, they move material at the lowest cost per tonne of any comparable-size truck. Best in-class payload-to-mass ratio gives you more power and agility to carry the load, for maximum productivity and profitability. What really sets these apart from other material movers is their ability to thrive on rough terrain, steep grades and mud. Try one to appreciate the difference.

Built for comfort

What operator wouldn't want to climb behind the wheel of a Bell ADT? It's spacious, quiet, climate-controlled cab is loaded with productivity-boosting comfort and convenience features that rival some SUVs.

From the state-of-the-art multifunction monitor and fully customisable controls to air-suspension seat, tilt/telescoping steering wheel and optional CD player with high-output speakers, the D-series provides everything your operators need to perform at their best. Unparalleled comfort.

- Who says you can't take it with you? There's a place for a coffee cup, in-door storage for an insulated flask or other carry-ons, and even a hot/cold box for refreshments.

- An intuitive monitor reveals vital operating information, detailed diagnostic readings of most sensors and switches and dump body function settings.

- Convenient sealed switch pad provides fingertip control of numerous productivity enhancing functions including: **Dump body upper limit. Soft stop / hard stop selection, I-Tip and Speed Control.**

- The standard sound-suppression package significantly reduces noise levels and operator fatigue.
- The adaptive transmission control adjusts clutch engagement to ensure smooth, consistent shifts throughout the life of the truck.
- A fully adjustable air-suspension seat is optimally positioned behind the front axle to help smooth out the ride when the going gets rough.
- Easy-to-understand instruments and intuitive controls wrap around the operator so they're easier to view and operate.
- A heavy-duty bi-level climate-control system with automotive-style louvres keeps the glass clear and cab comfortable.
- The spacious centre-mount seat and a comprehensive mirror package provide exceptional all-around visibility.
- You won't find retarder pedals or levers in a Bell truck. Retarder aggressiveness is simply set on the switch pad. Everything else is automatic.

Our innovative Comfort Ride system...

...is available as an option on the B35, B40 and B50 trucks to even further enhance ride comfort by ensuring minimal whole body vibration exposure. Productivity increases, through increased cycle times, and reduced haul road maintenance are even further benefits of the simple, but extremely successful system. Long haul cycles with rough, hard roads will see maximum benefit, especially on the unladen run.

The front suspension consists of independent suspension cylinders that allow the oil flow and pressure to be constantly changed to minimise the effects of machine movement. Sensors in the frame continually measure and accommodate for bumps in the surface while lateral sensors also measure any roll and constantly adjust cylinders to accommodate for this.

The incorporation of the dual stage sandwich block allows for differing suspension characteristics between laden and unladen runs. The simple mechanical solution has proved durable while being extremely effective in smoothing out the ride.

Nothing's built as strong as a Bell

Built smarter to work harder, these lean machines boast the material-moving muscle you need without the mass to feed.

Their lower mass reduces powertrain and structural stress.

Other uptime-boosting features include

enhanced diagnostics,

solid-state sealed

switches and re-inforced articulation joints to list but

a few. When you know how they're built, you'll run a Bell.

Automatic transmission retardation provides superior braking power and reduces service brake wear.

Hydraulically actuated dry-disc brakes deliver consistent "on-the-mark" braking, even in cold weather. Simplified design makes them easy to maintain.

Oil-immersed wet-disc brakes on the B50D and B40D (optional on B35D and B30D) are virtually maintenance-free.

B50D and B40D hydraulic, transmission, and service brake oil coolers employ a hydraulically driven fan that runs only as needed, helping conserve power and fuel.

Efficient viscous direct-drive fans in all Bell trucks provide engine and charge-air cooling.

1. The high-strength steel chassis delivers strength and rigidity without excess weight.
2. Planetary powershift transmission controls optimise shift points and protect the transmission from operator error and abuse. Thicker clutch plates, generous lubrication flow, and heavy-duty cooling ensure long life.
3. High-strength steel and widely spaced taper roller bearings in the articulation area enhance long-term durability.
4. Rough terrain demands tough suspensions such as the kind on a Bell ADT. Heavy-duty components absorb shocks and come back for more. You get best-in-class ground clearance, too.

Here's the lowdown on daily operating costs

You won't have to dig deep to uncover the many ways we've simplified service and made the D-series less expensive to maintain. Easy-to-reach dipsticks, see-through reservoirs, sight gauges and grouped service points make quick work of the daily routine. High-hour oil and filter change intervals reduce costs and planned downtime. Quick-change filters and extended engine and hydraulic oil-service intervals reduce costs and provide more uptime. Plus, an advanced diagnostic monitor and diagnostic test ports help you troubleshoot problems and make informed maintenance decisions.

- The engine dipstick and oil fill, oil and fuel filters and coolant reservoir are readily accessible.
- Available environmental drains allow quick, no-spill changes.
- Engine, transmission and hydraulic oil-change intervals of 500 hrs and 2 000 hrs add up to more uptime and less expense.
- The load-sensing hydraulic system was designed with simplicity in mind. Fewer components result in greater reliability and service ease.
- Your Bell Service Centre has the parts and back-up you need to stay productive and offers a wide variety of preventative maintenance and support programmes to help you control costs.

1. The cab can be tilted without special tools in minutes, for convenient service access to drivetrain components.

2. If something goes wrong, the diagnostic monitor provides service codes and supporting info to help you quickly pinpoint the problem.

3. Easily accessible test ports allow technicians to troubleshoot problems more quickly.

4. An in-cab load centre simplifies fuse replacement. Fewer relays, connectors and harnesses mean higher reliability.

5. See-through fluid reservoirs (B18D to B30D) and sight gauges let you check fluid levels at a glance.

6. The centralised lube bank places difficult-to-reach nipples within reach. The convenient lube chart helps ensure that nothing gets overlooked.

Safety is our Business too

By listening to our customers and reacting quicker to a changing workplace we provide a vehicle that exceeds application safety standards.

The exclusive on-board weighing option presents the operator with real time information on the payload while the machine is being loaded. A 'limp home' mode can also be activated if the machine is significantly over-loaded.

The park brake automatically applies when neutral is selected and it is not possible to engage neutral at speed. Torque dependent park brake release (hill assist) ensures no roll back on slopes.

The best in class retarder and engine braking automatically applies when the operator lifts his foot off the accelerator. Retarder aggressiveness can be simply adjusted on the sealed switch module ensuring maximum descent control for all conditions.

All trucks can be set up to automatically sound the horn when starting or switching between forward and reverse.

The incorporation of a Pitch and Roll sensor in the vehicle allows the bin to not be operated if the truck is in an unsafe position.

Keyless start, driver identity, and access codes ensures no unauthorized operation of your equipment.

Reverse cameras are available for factory or on site fitment ensuring full view when reversing.

Full hand-rails (to ISO 2876) can be installed to provide even more safety when performing engine checks.

Both operator or site selectable maximum speed control allows the vehicle to automatically decelerate and apply the retarder to prevent onsite speeding.

Optional Tyre pressure - monitoring System ensures that the operator has real time information on all tyres pressure and temperature conditions.

Where ever you are...

...we got you covered

Through our own Network as well as approved dealers and strategic alliances we can supply and support to the Global market. Develop a lasting and meaningful partnership with Bell Equipment through Bell Assure, your tailor made support structure furnished with all the after-sales tools you need to give you best value, peace of mind and a unique aftersales experience.

South African Manufacturing Facility

Global Logistics Center

German Manufacturing Facility

Used - Through the Bell Equipment used network, global opportunities can be explored to ensure best residual value when upgrading your trucks. Used units include full condition assessments guaranteeing peace of mind as well as different options to meet your criteria and budget.

Finance - Finance options can be tailored to your business needs through strong partnerships in all regions. Professional interaction and industry know how ensures fast and easy access to packages that meet your business profile - helping you win.

Parts - We believe there is more to Bell Equipment Company than simply our machines. We have an international network of dealers and subsidiaries stocking genuine Bell Parts you would expect available immediately. We pride ourselves that all care is taken to ensure the quality of replacement Bell Parts we stock meets the same stringent quality requirements as the parts we use in building our machines.

Technical Support - Bell Customer Support centres are located in key positions throughout all territories in which we operate to ensure that Bell Equipment is able to effectively support its products worldwide through parts availability and technical backup. As the worlds one stop shop, Bell Equipment also provides factory direct support for a full line of solid equipment 24 hours a day 365 days a year through Bell Technical Support. Such support includes Factory Technical Analysts, International Product Support, Training and complete literature.

Fleetmatic - Fleet management just got smarter. In its quest to provide lowest cost per tonne solutions to its customers and push the boundaries of earthmoving technology, Bell Equipment has developed Fleetm@tic, its own remote satellite fleet management tool.

Fleet management just got smarter

Bell Fleetm@tic is an essential tool in running your business whether used for optimising your production, controlling your fleet or detecting any losses. The cutting edge Fleetm@tic technology keeps Bell owners in touch with their equipment all the time. It provides accurate up-to-date operational data, production data, fault data as well as machine location and movements, in a cost effective and effortless manner.

Packages:

Fleetm@tic Std gives a daily report. This data includes position, tonnage, fuel, distance and speed; in effect all of the information from the previous day. Reports are available in a downloadable daily, weekly and monthly format.

Fleetm@tic Max has all the features of Std, and in addition packaged production data is sent every shift. Reports can be split by up to three different shifts. Ten event messages per day are also included in the reports. Events can also be set up for immediate reporting via a predetermined cell phone number.

Fleetm@tic Max Plus has all the features of Std and Max, but offers virtually real-time monitoring. Packaged data is also sent at ignition on and off, and at loading and tipping. Individual load cycle reports are also available. For instance it is possible to see the machine's location within the last several minutes, or fuel consumption and tonnage for the last haul cycle for virtual real-time control.

Information below is included in the basic data download.

- Date
- Odometer (km)
- Hours
- Tonnes moved
- Loads
- Distance
- Fuel level (litres)
- Fault codes
- Fuel burn (l/hr)
- Idle time laden (%)
- Idle time un-laden (%)
- Overload (%)
- Speed (km/h)
- Over rev count
- Brake usage (%)
- Events
- Cycle Times

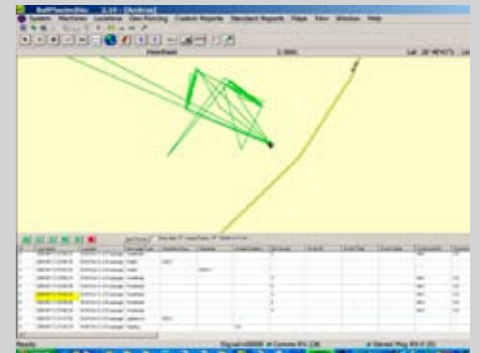

Easily Locate and track your machine on an interactive web based map, which allows you to zoom into your worksite to within several meters. Cutting edge Iridium technology ensures global coverage and unsurpassed reliability. Geofence boundaries can easily be set up with notification to both operator and owner when these boundaries have been crossed.

Receive on-line or email reports that cover each machine in your fleet. Reports cover everything you need to manage your site effectively. A Spreadsheet format can also be simply downloaded which will allow you to manipulate the data to meet your current reporting structure. All data can also be sorted by operator based on their individual code that is entered on the vehicle before startup.

Historic playback allows you to check on which route and stockpiles are being worked on to ensure optimal efficiency. Data can be used to reconstruct events, giving you all the information to take any corrective action. Time bar reporting is also beneficial to those machines out on rent.

Solid state, sealed componentry ensures maximum reliability in even the harshest environments.

GRADEABILITY

1. Determine tractive resistance by finding intersection of vehicle mass line and grade line. NOTE: 2% typical rolling resistance is already assumed in chart and grade line.
2. From this intersection, move straight left across charts until line intersects rimpull curve.
3. Read down from this point to determine maximum speed attained at that tractive resistance.

Rated Payload	23 200 kg (51,147 lbs)	27 300 kg (60,186 lbs)

GRADEABILITY

1. Determine tractive resistance by finding intersection of vehicle mass line and grade line. NOTE: 2% typical rolling resistance is already assumed in chart and grade line.
2. From this intersection, move straight left across charts until line intersects rimpull curve.
3. Read down from this point to determine maximum speed attained at that tractive resistance.

GRADEABILITY

1. Determine tractive resistance by finding intersection of vehicle mass line and grade line. NOTE: 2% typical rolling resistance is already assumed in chart and grade line.
2. From this intersection, move straight left across charts until line intersects rimpull curve.
3. Read down from this point to determine maximum speed attained at that tractive resistance.

RETARDATION

1. Determine retardation force required by finding intersection of vehicle mass line.
2. From this intersection, move straight left across charts until line intersects the curve. NOTE: 2% typical rolling resistance is already assumed in chart.
3. Read down from this point to determine maximum speed.

RETARDATION

1. Determine retardation force required by finding intersection of vehicle mass line.
2. From this intersection, move straight left across charts until line intersects the curve. NOTE: 2% typical rolling resistance is already assumed in chart.
